

Instructions: Stadium Base Kit Assembly

The FlickForKicks Base Kit contains seven slot-together sections. No tools are required. Follow the steps below to assemble.

Once complete, position the tabletop between the battens. Make sure to align the top notches to the tabletop rails on its underside. This helps prevent

the tabletop from being knocked off the base. If you need help, please contact us at FlickForKicks.com

Insert the end of the centre piece through the slot in one of the end supports.

Make sure that the inside face of the end support is flat against the centre piece. This leaves a space wide enough for the holding piece to slot in on the outside face.

Slide the holding piece into the slot all the way down to the bottom.

Repeat steps 1-3 on the other end.

Insert the notches of the battens into the top edge of the end supports so they cannot move.

Done! Your base kit is complete and ready to support your tabletop.
